Optional elements

light package

Optionally all sideboards can be equipped with a light package for internal illumination. Each consisting of two warm white LED stripes with diffuser cover. Those are flush mounted into the upper panel.

The light is operated by a switch (veneered invisibly) placed on top the lower panel in the front. The light is activated by touch. A longer contact dims the light.

The quantity and positioning of the switch differs according to the version chosen:

Sideboard 2 doors: one switch on the right, one switch on the left

Sideboard 4 doors: one switch on the right, a motion detector behind the wooden doors

Sideboard 8 doors: one switch on the right, one switch on the right of the middle

Sideboard without door: one switch on the right

Please note that UL-certifications (North America) and PSE-certifications (Japan) are available for the light package.

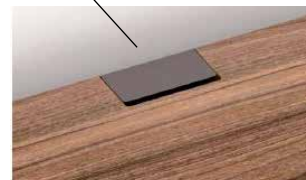

cable management set

This set is optionally available for all sideboards with 4 doors (for a surcharge).

This set contains the vertical cable duct within the back panel of the sideboard as well as a coverage on top of the upper panel (cable outlet). In steel, powder-coated bronze matt. All elements of the cable management set are attached magnetically.

The set also includes the louvers in the lower panel for the ventilation of technical devices as well as a detachable cable tray underneath the sideboard.

THE FARNS

Base designs

frame height 15 cm

frame height 30 cm

All sideboards are available in both frame heights.

Variants*

with 2 doors
(in the front)

with 4 doors
(in the front)

with 8 doors
(4 in the front, 4 on the back)

without doors

corpus height 45 cm

front: outer doors in glass,
inner doors in wood

back: outer panel in glass,
inner panel in wood

front: outer doors in glass,
inner doors in wood

back: same as front

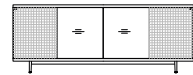

front: open

back: panel in glass

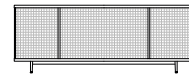

corpus height 75 cm

front: outer doors in glass,
inner doors in wood

back: outer panel in glass,
inner panel in wood

front: open

back: panel in glass

corpus height 120 cm

front: glass door on the left,
wooden door on the right

back: wooden door on the left,
glass door on the right

*Note: pictured above is version L.
Version R is side-inverted.*

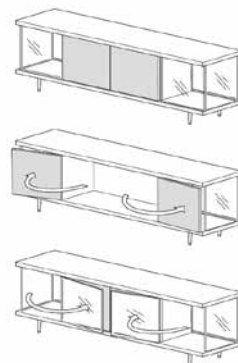

* all examples are also available with frame height 30 cm

Flexible doors

All doors can be opened at 180 degrees.

Adjacent glass and wooden doors have a common pivot point. Around this point doors can be turned together. Invisible magnets keep them together and also hold them in their final positions.

A door opened at 180° together with an adjacent door looks like ONE door. This is possible in both directions. This offers a variety of door combinations and positions.
